Context

This is a US job secured by one of our engineers as a senior software engineer on Feb 2023. The company is a startup and they are building a bitcoin rewards app. Team is pretty small, CEO, CTO, 2 software engineers, contract designer and head of strategy.

Tech stack

Golang, Hasura, Equinix, Docker, Lightning Network, Bitcoin, E-Commerce, Equinix, React, TypeScript, Tailwind CSS

Role:

This is a senior software engineer role and you'll have to take part in development of the entire application. You'll also have to write solid code, be a critical problem solver and learn everything quickly.

Requirements:

- General full-stack experience using React, TypeScript and Go
- Proven experience with writing tests in Go
- Solid experience with e-commerce platforms and its APIs
- Prior experience with Mac environment
- Postgres & GraphQL experience is a must and Hasura is a bonus
- Basic Blockchain knowledge is a must and Lightning Network experience is a huge bonus
- Must be a FAST LEARNER and PROBLEM SOLVER
- Must be working in EST business hours (8 am – 5 pm)
- Must be working in the company laptop remotely (must have stable internet connection)
- Solid software fundamental knowledge
- Concise communication skills

Interview process:

- 20 mins: Culture fit – English & communication skills, HR questions
- 40 mins: Technical Interview with live coding
- Sign NDA and solid background check

Start date: ASAP

Salary: $3000 for the first 3 months, up to $200 bonus afterwards based on your performance if you show us trustworthiness and skills

Pay period: The end day of every month – i.e. 8/31, 9/30, 10/31, 11/30, 12/31

Shift: Mon – Fri 8 am – 5 pm

Notice period: 2 weeks, which means that both parties (you can me) have responsibility to let other party know that partnership needs to be terminated for some reason as long as the job itself is not ended immediately because of performance issue or other critical security issues.
