Context

This is a US job secured by one of our engineers as a senior web developer on Jul 2024. The team is a web development team of a big US Internet company. They have 4 engineers, QA, team lead, manager, product owner, and stakeholders.

Tech stack

JavaScript, Vue.js, PHP, Craft CMS, Jest, Playwright

Role:

This is a senior web developer role and you'll have to take part in development of the company website (built by CMS) focusing on frontend. You'll have to suggest great proposals to improve codebase, play a key role in migrating Craft CMS to a new CMS, write automated tests using Jest & Playwright, and collaborate closely with team members, especially QA engineer, team lead and other engineers in the team.

Requirements:

- Solid web development experience using CMS
- JavaScript and PHP expert
- Experience with Vue.js
- Experience optimizing website performance
- Proven experience with automation testing using Jest and Cypress
- Must be working in EST business hours (8 am – 5 pm)
- Must be working in the company laptop remotely (must have stable internet connection)
- Solid software fundamental knowledge
- Concise and clear communication skills

Interview process:

- 20 mins: Culture fit – English & communication skills, HR questions
- 40 mins: Technical Interview with live coding
- Sign NDA and solid background check

Start date: ASAP

Salary: $2500 for the first 3 months, up to $3000 afterwards based on your performance if you show us trustworthiness and skills

Pay period: The end day of every month – i.e. 8/31, 9/30, 10/31, 11/30, 12/31

Shift: Mon – Fri 8 am – 5 pm, except US federal holidays

Notice period: 2 weeks, which means that both parties (you can me) have responsibility to let other party know that partnership needs to be terminated for some reason as long as the job itself is not ended immediately because of performance issue or other critical security issues.
